ITU

ITU-T SG20 Current Key topics

Research and emerging technologies including terminology and definitions

- Common terminology for IoT and SC&C
- Consideration on end user adoption of IoT
- IPv6
- Research and emerging technologies related to IoT and SC&C

Internet of Things (IoT)

- General requirements and capabilities of IoT applications and services
- Frameworks and functional architectures of IoT to support networks and gateway
- Specific IoT services covering transportation safety services, e-health services and so on
- IoT based smart greenhouse, smart farming, smart manufacturing and Big Data issues
- Security, trust and privacy protection in IoT

Smart cities and Communities (SC&C)

- SC&C related ecosystem, applications, services and use cases
- Standards that are directly related to SC&C with focus on:

✓ Urban planning ✓ Water ✓ Mobility ✓ Logistic ✓ Healthcare ✓ E-government ✓ Education ✓ Transport ✓ Energy

- Open Data
- Spatio-temporal modeling for SC&C
- Integrated sensing & management for Smart Sustainable Cities

ITU-T SG20 Approved Recommendations

- **ITU-T Y.4113 "Requirements of the network for the Internet of Things":** This Recommendation describes the requirements of the network for the Internet of Things (IoT) that enhance the common requirements of the IoT identified in ITU-T Recommendation Y.2066. The requirements focus on the transport functions of the network, but also cover service support functions.

- **ITU-T Y.4451 "Framework of constrained device networking in the IoT environments":** This Recommendation specifies the framework of constrained device networking in the Internet of things (IoT) environments in an aspect of the communications of IoT device. This Recommendation describes the concept of constrained device networking in the IoT environments and communication of constrained devices. It also describes network architecture and mechanisms of constrained device networking.

- **ITU-T Y.4452 "Functional framework of Web of Objects":** This Recommendation provides the functional framework of Web of Objects (WoO) including the concept, the reference model, functional capabilities and information models.

- **ITU-T Y.4453 "Adaptive software framework for IoT devices":** This Recommendation addresses the concept of the adaptive software framework (ASF), identifies high-level requirements, and provides a reference functional architecture for the IoT devices.

- **ITU-T Y.4553 "Requirements of smartphone as sink node for IoT applications and services":** This Recommendation provides common Requirements of a smartphone working as a sink node (SPSN) for IoT applications and services. This Recommendation clarifies the concept of a sink node in IoT domain, and identifies the characteristics, work modes and the high level functional requirements of the SPSN. The use cases are also provided in appendix.

- **ITU-T Y.4702 "Common requirements and capabilities":** This Recommendation provides the common requirements and capabilities of device management in the Internet of Things (IoT). The provided common requirements and capabilities are intended to be generally applicable in device management application scenarios.

ITU-T SG20 determined Recommendation

1 Recommendation determined

ITU-T Y.4454 "Platforms Interoperability for Smart Cities"

Determined on 5 August 2016

This Recommendation presents a platform of smart city services that ensures their correct functioning, as well as their efficiency, performance, security and scalability. The platform provides a comprehensive system for smart city management, including:

a)   Compiling data on the city, citizens and businesses.

b)   Distributing data, to be subsequently processed by managers of the different services.

c)   Analyzing data.

d)   Making decisions by returning the analysed data to the systems carrying out the different tasks.

e)   Making data and capabilities available to developers to facilitate an applications ecosystem based on a platform that creates added value for citizens.

JCA – IoT and SC&C

- To co-ordinate the activity on IoT & SCC across ITU-T Study Groups and to coordinate with ITU-R and ITU-D.
- To provide a visible contact point IoT and SC&C activities in ITU-T, to seek co-operation from external bodies working in the field of IoT & SCC and enable effective two-way communication with these bodies.
- Maintenance of a list of cross-SDO IoT & SCC standardization items and associated roadmap.

- Next meeting to take place in March 2017

Co-Conveners:

Smart Sustainable city definition

"A smart sustainable city is an innovative city that uses information and communication technologies (ICTs) and other means to improve quality of life, efficiency of urban operation and services, and competitiveness, while ensuring that it meets the needs of present and future generations with respect to economic, social, environmental as well as cultural aspects".
